

Technical Information

DATE: July 17, 2015

MODEL: RDD-1580

Software Release Notes

The following document contains details of the software updates for the RDD-1580. These models utilize three separate software modules (Main, Front USB, PC-USB) and the release notes for each are listed below.

Key:

New Feature

Feature Change

Bug Fix – Critical

Bug Fix – Minor

Main Software

V1.14 to V1.16

September 2, 2014

- **Bug Fix (Minor):** Updated the RS232 feedback strings to remove an extra “null” character that was being attached to the end of every string during RS232 communication.
- **Bug Fix (Minor):** Corrected the RS232 feedback string for power status to display as “power=on!” or “power=standby!” to be consistent with all other RS232 feedback strings. Previously power feedback would display as “power_on!” or “power_off!”.

V1.13 to V1.14

November 6, 2013

- **Bug Fix (Minor):** Corrected an issue when listening to iTunes or Windows Media Player on the PC-USB input, if the source was paused and the RDD-1580 switched to a different input then back to PC-USB, it would automatically unpause the source and begin playing instead of remaining paused until manually changed.

Front USB Software

V5.00BT to V5.07BT

July 17, 2015

- **Bug Fix (Minor):** Fixed a bug that could cause the unit to intermittently jump to the next track when playing audio from iOS devices with services such as Spotify or Tidal.
- **Bug Fix (Minor):** Corrected an issue that could cause the unit to eventually stop playing audio from an iPod Classic when playing from a very long playlist.
